# Beta Testing of a System

## System 1950 Update Beta Customer Survey

Dear customer,

As part of the Beta test that your company is taking part of I would like to ask you some questions regarding the System 1950 Update. We value your feedback and intend to use it as the basis for future improvements of the hardware and software. Please answer the following questions, which should take an estimated 30 minutes of your time.

Before starting with the questions let me explain that on this survey you will be asked about the various new features of the System 1950 Update. The questionnaire's objective is to hear your opinion regarding the improvements made in the System 1950 Update compared to the System 1950. The questionnaire will focus on your level of satisfaction from the improvement in your productivity, print quality and profitability generated by the new features.

In order to answer these questions please state the number which best reflects how satisfied you feel about the subject asked, on a scale from 1 to 5 when:

- 5 means Very high satisfaction level
- 4 means High satisfaction level
- 3 means Average satisfaction level
- 2 means Low satisfaction level
- 1 means Very Low satisfaction level

And 0 means Not relevant- you did not use the feature

Thank you in advance for your cooperation

## Risk Mitigation Plans

- 1. Mapping potential participants
- 1.1. Registering potential participants
- 1.2. Planning the test location
- 1.3. Communication letters and expectation setting
- 1.4. Planning Beta Duration
- 1.5. Planning number of participants
- 1.6. Logistics considerations
- 1.7. Reporting processes
- 1.8. Reporting processes
- 1.9. Defining Beta Objectives
- 1.10. Setting Beta Success Criteria (SC)
- 1.11. Training
- 1.12. Documentation
- 1.13. Database
- 2.1. Design of feedback questionnaire
- 2.2. Operational Data Control
- 3.1. Analyze Beta Data
- 3.2. Risk Assessment
- 3.3. Presenting results

# Risk assessment

# Financial data

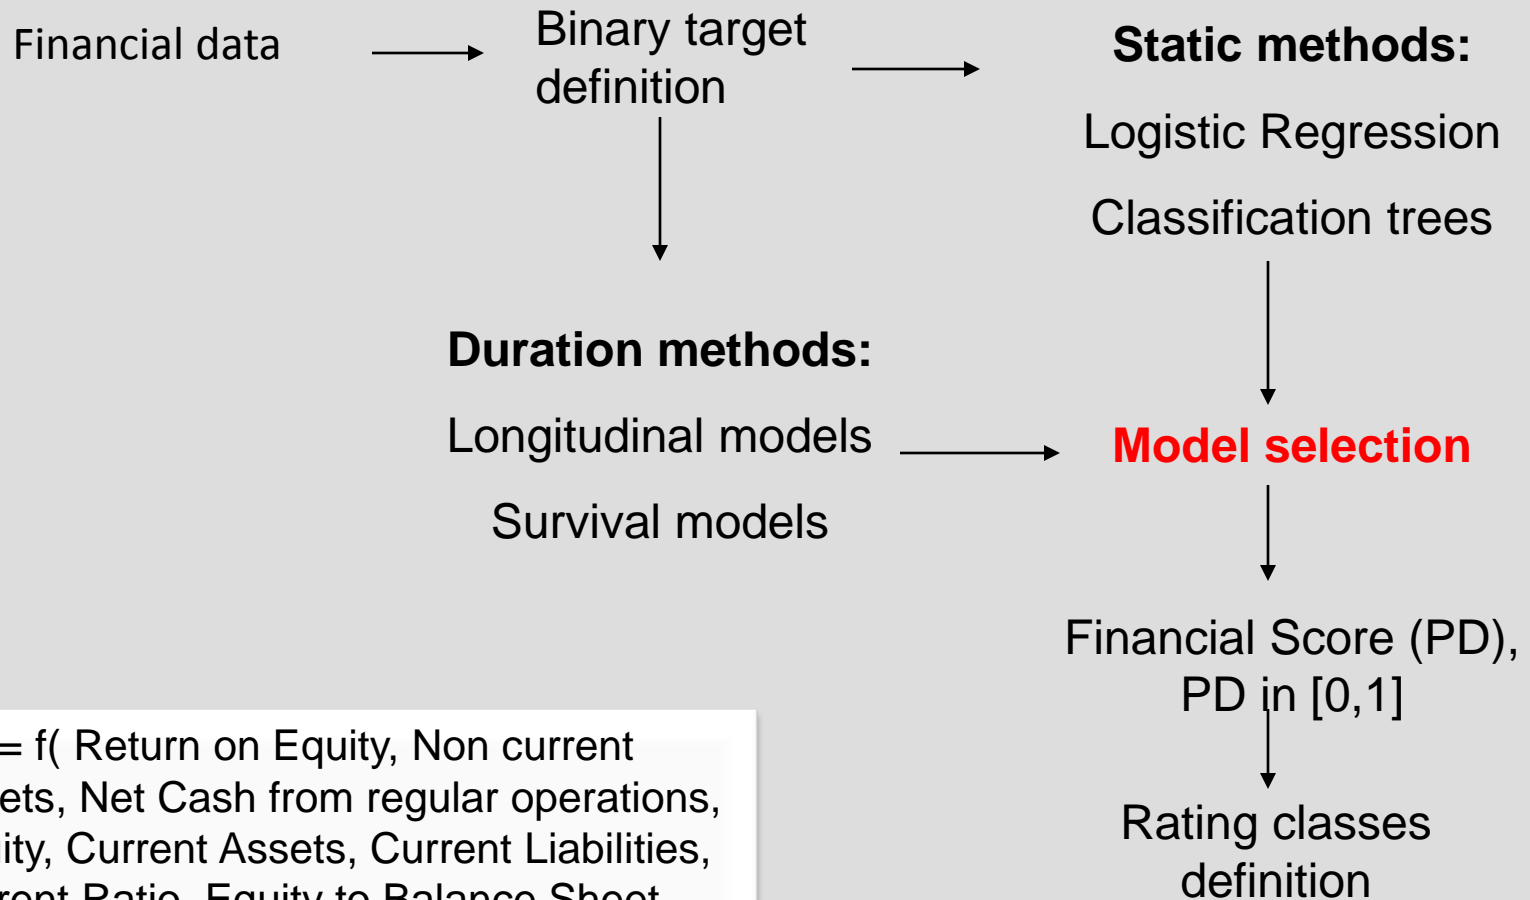

- Collect Balance Sheets
- Extract quantitative information from XBRL balance sheets data
- Derive financial ratios useful to predict the default probabilities of companies
- The target variable is binary (0: good, 1: bad)
- The final data matrix is composed of  $n$  companies and  $p$  covariates

# Financial data: an example

<b>Customer</b>	<b>Financial Ratio 1</b>	<b>Financial Ratio 2</b>	<b>Financial Ratio 3</b>	<b>Financial Ratio p</b>
<b>1</b>	11794200	10921774	393717	627750
<b>2</b>	47947	34813	13134	27058

...	111200	94573	16627	12914
...	160747	120877	39870	111038
...	2303915	1101978	1201937	591154
...	97970	70909	27061	34268
<b>n</b>	127953	75586	52367	16526

# Predictive/Classification models

PD = f( Return on Equity, Non current Assets, Net Cash from regular operations, Equity, Current Assets, Current Liabilities, Current Ratio, Equity to Balance Sheet Total, Pre-tax Prot, Net Prot).

# Financial score

Customer	LogReg 1	LogReg 2	LogReg 3
1	0.590413725	0.483517201	0.60105205
...	1	1	1
...	0.198422752	0.288418151	0.193413586
...	0.311519917	0.25348666	0.4165347
...	0.58567025	0.481172502	0.59679867
...	0.593873953	0.487455978	0.604682691
...	0.606705681	0.499173616	0.616373138
n	0.59845664	0.492608605	0.609354881

The resulting PD are based on logistic regression. More precisely, Reg 1, Reg 2 and Reg 3 consider backward, forward and stepwise selection respectively.

# Financial and Operational scores

Customer	Financial Score	Operational Score
1	0.60105205	0.453472222
2	1	1
...	0.193413586	0.440277778

...	0.616373138	0.417361111
n	0.609354881	0.472222222

## Financial Score

## Operational Score

 $\pi_r^*$  $\pi_r$ 

$$\delta_r = \frac{\sigma^2(\pi_r^*)}{\sigma^2(\pi_r) + \sigma^2(\pi_r^*)}$$

Precision Indicator in group r

r=1,...,K

$$I_r = \delta_r \pi_r + (1 - \delta_r) \pi_r^*$$

## Integrated Score

The precision indicator is derived on the basis of the variances estimated across “r” bootstrapped data sets.
